Professional Summary

Software Engineer (BSc IT) with hands-on experience building full-stack web and mobile applications end-to-end, from requirement gathering to deployment (Node.js, React.js, React Native, TypeScript, SQL/NoSQL). Skilled at explaining technical concepts clearly, running code demonstrations, and collaborating across Agile teams. Now looking to bring this technical and communication background to a Junior Software Trainer role, helping clients and teams adopt and use software confidently.

Core Competencies Skills

Technical Training Support: Technical Presentations, Feature Demonstrations, Creating User Guides, Client Support, Software Onboarding Processes.

Full-Stack Development: Node.js, Express.js, TypeScript, JavaScript, Java, React.js, React Native, HTML5, CSS3, Responsive UI Design.

Databases Cloud: PostgreSQL, MySQL, MongoDB, Firestore, Redis, Google Cloud Platform (GCP), Firebase, Serverless Architecture.

Tools Professional Practices: Git, Postman, Agile/Scrum Development, Technical Code Reviews, Debugging, Documentation, Claude Code (AI-assisted development).

Soft Skills: Clear English Communication, Public Speaking, Structural Organization, Active Patience, Collaborative Problem Solving.

Experience

Ariso Technologies (Pvt) Ltd — Associate Software Engineer, Full-Stack Development 10/2024 – Present

- Delivered end-to-end software features across frontend, backend, database, and cloud layers, from requirement analysis and technical design through implementation, testing, and deployment.
- Developed scalable RESTful APIs using Node.js, Express.js, and TypeScript, implementing complex business logic for production applications.
- Designed and deployed serverless backend services using Firebase Cloud Functions and Google Cloud Run to support scalable production workloads.
- Developed responsive frontend components using React.js and integrated REST APIs to deliver user-friendly web application features.
- Designed, managed, and optimized Firestore and PostgreSQL data models, improving query performance and reducing application latency by 25
- Implemented Redis caching to improve application performance and reduce database load for frequently accessed data.
- Integrated third-party APIs and external services to extend platform capabilities and support business requirements.
- Implemented secure authentication and role-based authorization using JWT and RBAC to protect application resources and sensitive endpoints.
- Collaborated with Web, Mobile, and AI teams to design and deliver end-to-end features within Agile/Scrum development cycles.
- Participated in requirement discussions, sprint planning, technical design, code reviews, feature demonstrations, and technical discussions.
- Debugged application and production issues across frontend, backend, database, and cloud environments, contributing to system reliability and maintainability.

- Worked with Git, Postman, Firebase, GCP, CI/CD workflows, and modern development tools including Claude Code for AI-assisted development and documentation.

Projects

Smart Crew — Workforce Inventory Management Platform

- Built a multi-tenant SaaS platform for NFC-based worker attendance, job scheduling, and inventory management, spanning a **React admin dashboard, React Native mobile application, and serverless backend**.
- Developed end-to-end features using **React, React Native, TypeScript, Firebase/Firestore, and Cloud Functions**, covering requirements, implementation, testing, and deployment.
- Designed a permission-string-based **Role-Based Access Control (RBAC)** system across web, mobile, and backend, supporting tenant-scoped data and custom tenant-defined roles.
- Implemented Cloud Functions APIs for attendance, inventory, purchase orders, goods receipts, stock ledger, and sales workflows using a consistent **authorization, tenant resolution, business logic, and repository** architecture.
- Developed and integrated NFC-based worker check-in/check-out functionality within the React Native mobile application.
- Developed administrative interfaces for managing workers, sites, attendance, schedules, inventory, and operational workflows.
- Led a UI/UX audit and design-system consolidation across the admin dashboard to improve consistency and usability.
- Worked across the complete software delivery cycle, including **requirement gathering, feature design, development, testing, deployment, and user-focused system understanding**.

Curry King (Pvt) Ltd — Production Food Ordering Platform

- Contributed to a production food ordering ecosystem powering **5 live applications**, including administrative dashboards and customer-facing applications.
- Designed and developed scalable serverless backend services using **Firebase Cloud Functions, Node.js, TypeScript, and GCP**.
- Built and maintained **100+ secure RESTful APIs** supporting restaurant management, menu systems, order processing, cart workflows, customer operations, and financial processes.
- Implemented complex business workflows covering **orders, group carts, delivery assignment, wallets, commissions, refunds, and payouts**.
- Developed administrative and access-control functionality for different organizational levels, including **Admin, Super Admin, Customer, and role-based permissions**.
- Integrated third-party services including **Algolia Search** and cloud storage with secure signed URL-based file uploads.
- Implemented **Role-Based Access Control (RBAC)** to secure application resources and maintain appropriate administrative access levels.
- Optimized application performance through **Redis caching and PostgreSQL query optimization**.
- Implemented logging and monitoring practices to support production debugging, system reliability, and issue resolution.
- Collaborated with frontend, mobile, and AI teams within Agile development cycles and participated in feature discussions and demonstrations.

Intelligent Child Health Development Record System

- Developed a web-based system for managing child health and development records as a final-year software engineering project.
- Designed application workflows, implemented core system functionality, and developed user interfaces based on identified requirements.
- Worked across frontend, backend, database, and system integration components as part of the full software development lifecycle.

Education

University of Jaffna, BSc in Information Technology

Aug 2021 – Feb 2025
